CNC CYLINDRICAL GRINDER CAM TYPE

OCD-CAM CNC series

PALAMRY PALMARY MACHINERY CO., LTD.

OCD-3260CAM]

FEATURES

- Main structure of the CNC cylindrical grinder, when in combination with angle control of spindle by C axis (built-in spindle motor), is capable of grinding various special shaped workpiece.
- Working spindle carried with precision angle decoder, high resolution of angle control reaching up to 0.1um. The feed axis is driven by linear motor and equipped
- with close loop control optical scale to reach high precision.
- Retaining various functions of CNC cylindrical grinder, and applicable to angle and speed control.
- Fast and easy transferring custom-made grinding program, when operated with PALMARY-developed CAD/CAM software (optional).

- A high-speed algorithm controller executed under PC Based + Windows XP, allowing input of 3rd-party software.
- An optional gap and crash control, consistent grinding operations are ensured. Another benefit is to prevent parts colliding caused by erroneous motion when executing
- The optional diamond roller dressing device for workspindle mounted type (metal bond) or acuminate profile roller type (diamond arranged) is equipped according to functional requirement.
- USB access, combined with the market available USB high-speed transmission interface, providing excellent data portability.
- With 1ms single session processing time.

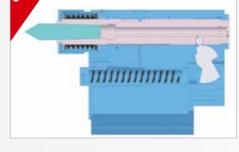

DIAMOND ROLLER DRESSING DEVICE (optional)

• Workspindle mounted type (metal bond) MAINTENANCE Acuminate profile roller type (diamond arranged)
